GENERAL INTRODUCTION

PROVENANCE

The papers were received for cataloguing from St John's College, Cambridge in May 2002.

OUTLINE OF THE LIFE AND CAREER OF HAROLD JEFFREYS

Harold Jeffreys was born on 22 April 1891 at Fatfield, a colliery village in County Durham where his father was headmaster of the village school. He received his school education at Fatfield and Rutherford College, Newcastle, proceeding in 1907 to Armstrong College, Newcastle, the forerunner of Newcastle University but then part of Durham University. Here he took courses in mathematics, physics, chemistry and geology, graduating in June 1910 with first class marks and a distinction in mathematics. Encouraged by his mathematics teacher C.M. Jessop he applied for a Cambridge award and in December 1909 he was elected to an entrance scholarship at St John's College as one of four mathematics scholars. Although there were financial difficulties and the problem of adjusting to a standard of mathematics much harder than that of Armstrong College, his performance in the third year of the Mathematical Tripos (1913) was a distinguished one. He was awarded one of the two Hughes Prizes for undergraduates who had done best in the college in any subject, his college scholarship was extended for a fourth year, and he began research.

Jeffreys was elected a fellow of St John's College in November 1914 and remained one for the rest of his life. He held the Isaac Newton Studentship, 1914-1917, worked part-time at the Cavendish Laboratory on war-time problems. 1915-1917, moving to the Meteorological Office in London in 1917 where he first employed his mathematical skills to 'certain difficult questions in gunnery which came to us from the services' and then to 'problems of the atmosphere'. In 1922 he returned to Cambridge as College lecturer in mathematics and was appointed to a university lectureship in 1926. He was Reader in Geophysics in 1931 and Plumian Professor of Astronomy and Experimental Philosophy in 1946, retiring in 1958.

Jeffreys was one of the small international group of scientists who founded modern geophysics. He applied classical mechanics to investigate the interior of the earth, showing that the core of the Earth was liquid and that there is a substantial difference between the upper and lower mantle. His analyses of travel times of seismic waves with K.E. Bullen became standards of reference. Generations of students learned their geophysics from his book *The Earth* (first published 1924, sixth edition 1976). Jeffreys was also distinguished as a statistician, developing a theory of probability on Bayesian principles and in a form suitable for use in the physical sciences. His key books in statistics

were *Scientific Inference* (1931) and *Theory of Probability* (1939). He also made significant contributions early in his career in fluid dynamics and dynamical meteorology and, although primarily an applied mathematician, in pure mathematics. His use and development of mathematical techniques led him to write, jointly with his wife, Bertha Swirles Jeffreys, the treatise *Methods of Mathematical Physics* (1946), which went through several editions. His first published paper (1910) was on photography and his early interest in natural history is reflected in papers on plant ecology.

Amongst his professional affiliations were the Royal Astronomical Society where he was active in supporting and developing geophysics over many years (President, 1955-1957), the British Association for the Advancement of Science, the National Committee for Geodesy and Geophysics (chairman of the Seismology SubCommittee), the International Union of Geodesy and Geophysics (President of the International Association of Seismology 1957-1960) and the International Astronomical Union.

His scientific distinction was recognised by many honours. He was elected FRS in 1925 (Royal Medal 1948, Copley Medal 1960; Bakerian Lecture, 1952); at the time of his death he was Senior Fellow. Others scientific awards included the Gold Medal of the Royal Astronomical Society 1937, the Vetlesen Prize of Columbia University 1962 and the Wollaston Medal of the Geological Society 1964. He was made a knight bachelor in 1953

He married Bertha Swirles in 1940. She was a student at Girton College, Cambridge where she took a Ph.D in atomic physics under the supervision of R.H. Fowler and D.R. Hartree. After periods at Manchester, Bristol and Imperial College London she returned to Girton in 1938 as Fellow and Lecturer in Mathematics. She was Director of Studies in Mathematics, 1949-1969 and Vice-Mistress, 1966-1969. Her great support for Jeffreys, especially in his last decades, is very evident in his archives. Her role in preserving and identifying materials is acknowledged below.

Jeffreys died on 18 March 1989.

For a fuller account of Jeffreys's life and work see the memoir by Sir Alan Cook for the Royal Society, *Biographical memoirs of Fellows of the Royal Society*, vol 36 (1990), 303-333.

DESCRIPTION OF THE COLLECTION

The material is presented in the order given in the list of contents. Although the papers date predominantly from the decades after Jeffreys's formal retirement there is significant earlier material, especially papers of biographical interest and photographs. The papers cover the period 1886-1999.

Section A, Biographical, includes obituaries and tributes, biographical notes by Jeffreys himself and transcriptions of interviews conducted by colleagues (see also Section H). There is career, honours and awards material spanning his whole life from birth certificate to his death including letters of condolence received by Lady Jeffreys. There is significant early material, for example, correspondence with St John's College tutors, 1909-1910, Jeffreys's notes of lectures by H.F. Baker, Ebenezer Cunningham and A.S. Eddington, 1911-1914, 'Letters from Johnians 1917', including M.H.A. Newman, records of Jeffreys's period with the Meteorological Office, 1917-1922, including copy of a reference from its director Sir Napier Shaw, and Jeffreys's memorandum on the constitution of the Senate at Cambridge, 1921, addressed to the Royal Commission on the Universities of Oxford and Cambridge. His appointment as Plumian Professor in 1946 and later honours, including 70th and 90th birthday celebrations, are documented. There is a little material relating to Jeffreys's father, 1886-1947, and a sequence of family and personal correspondence, 1917-1992, which reflects his continuing interest and connexions with the North East of England where he was born. Miscellaneous biographical items include a sketch book, possibly dating from Jeffreys's school days, a few letters relating to Jeffreys's early interests in photography and botany, including a letter from William Bateson, 1915, a collection of old railway tickets, Jeffreys's passports and a significant accumulation of travel literature.

Section B, Research, is presented alphabetically by topic or container title from 'Artificial Moon Craters' to 'Variation of Latitude' (with R.O. Vicente) and covers the period 1902-1996. The documentation may comprise notebooks, manuscript working, data, drafts, correspondence and off-prints. The earliest material is a group of nine small notebooks used by Jeffreys for natural history notes, 1902-1915. There are also significant components relating to probability and statistics, and seismology, especially the later work in collaboration with R.S. Sidhu, M. Gogna and M. Shimshoni. Additionally, at the end of the alphabetical sequence, there is a small group of miscellaneous papers, including manuscripts by C.G. Darwin, and drafts relating to theses supervised by Jeffreys: V.S. Huzubazar in respect of statistics (1949) and E.P. Arnold in respect of the revision of seismological tables (1965).

Section C, Lectures, covers the period 1945-1982 including a number of undated drafts. It is chiefly the contents of two folders of 'Occasional lectures' and 'Various addresses'. Topics include probability theory, seismology, continental drift, Cambridge mathematics and the psychological significance of death duties.

Section D, Publications, is the largest in the collection. Jeffreys's major books are represented including *The Earth* (1924), especially the sixth edition (1976), *Methods of Mathematical Physics* (1946) (with Bertha Swirles Jeffreys) and the *Collected Works* (1971-1977) edited by Jeffreys and Lady Jeffreys. There may be drafts, manuscript working, agreements and correspondence with publishers, correspondence with colleagues, proofs, reviews and royalty statements. Lady Jeffreys

may appear as a correspondent, especially in respect of the *Collected Works*. There is a separate sequence of material relating to shorter publications which includes, in addition to a number of Jeffreys's scientific papers, his Royal Society memoir of Robert Stoneley and his obituaries of Ebenezer Cunningham for St John's College Cambridge and *Nature*. Also presented in this section is a chronological sequence (not complete) of Jeffreys's off-prints, 1910-1988.

Section E, Societies and organisations, is not extensive. Only five British and international bodies are represented. Of considerable biographical interest are the correspondence and papers relating to the founding in 1918 of the National Union of Scientific Workers (Association of Scientific Workers from 1927). Jeffreys was a member of the original executive committee. Also of some significance are papers relating to the British National Committee for Geodesy and Geophysics, especially its Seismology SubCommittee, 1956-1973.

Section F, Visits and conferences, is slight. It includes a little material for visits to the USA in 1950-1951, 1964, 1967 and 1972 and Singapore and Japan in 1971. Best documented, though still very sparsely, is the world trip which Jeffreys and Lady Jeffreys made in 1959 including New Zealand, Australia, Singapore and India. There is a good photographic record of many visits in Section H.

Section G, Correspondence, is presented in a number of sequences: scientific correspondence arranged alphabetically by correspondent and covering the period 1922-1995, a chronological sequence of shorter correspondence, 1914-1995, and a small group of references and recommendations, 1957-1984. There is significant correspondence and related material with colleagues and collaborators such as R.A. Lyttleton and M. Shimshoni and individual items or brief exchanges with major figures of an earlier generation such as A.S. Eddington and Ernest Rutherford. Correspondence after Jeffreys's death in 1989 is with Lady Jeffreys who may also appear as a correspondent before that date. Lady Jeffreys actively sort to assemble Jeffreys's correspondence from a variety of sources including colleagues and their families. For example, Desmond King-Hele passed to Lady Jeffreys his correspondence with Jeffreys, 1961-1989, and Dorothy Stoneley gave to her Jeffreys's letters to Robert Stoneley, including undated letters, probably from the 1920s and 1930s. Almost all the K.E. Bullen and R.A. Fisher correspondence with Jeffreys presented here is photocopied material made available by academic archives in Australia, the Universities of Sydney and Adelaide, respectively.

Section H, Non-textual material, is of major importance both for documenting in photographs Jeffreys's life and career and his interest in photography which developed at an early age. There are photographs of 'Harold's Youth', portrait photographs, photographs at various award ceremonies and with Lady Jeffreys, colleagues and friends and photographs taken on visits and at conferences. Jeffreys's role as a photographer is represented, for example, by a number of photograph albums made up of photographs taken by him in the first decades of the twentieth century. A wide variety of

persons and places are depicted. Fellow scientists include F.C. Bartlett, Arthur Holmes, F.G. Hopkins, R. Stoneley, G.I. Taylor and D.M. Wrinch and places include many in the North East of England and in and around Cambridge including St John's College. An album is devoted to a visit to Canada in 1924 in connexion with a British Association for the Advancement of Science meeting. Jeffreys's later photography is represented by an extensive collection of transparencies, many depicting the round the world tour made by Sir Harold and Lady Jeffreys in 1959. Additionally there are recordings of Jeffreys in conversation with colleagues, a sound recording with G.A. Barnard and a video recording with D.V. Lindley.

There is also an index of correspondents

ACKNOWLEDGEMENTS

Lady Jeffreys retained her husband's papers at the family home, 160 Huntington Road, Cambridge until her death on 18 December 1999. In the period following Sir Harold's death (and probably for a period before) she played an indispensable role in assembling and preserving papers and identifying materials such as research notes, correspondence and photographs. This work has resulted in an archive of Sir Harold of significantly enhanced value for the scholarly community and significantly easier to process.

Lady Jeffreys's own papers (currently in process as of May 2004) contain a sizeable component of material relating to Sir Harold reflecting the many tributes, memorials, conferences in his honour and the like which followed in the ten years after his death and with which Lady Jeffreys was very much involved.

It is evident from the archival record that Lady Jeffreys took very seriously in relation to her husband's papers the establishment of a Contemporary Scientific Archives Centre in Oxford in 1973 (the predecessor organisation of the NCUACS) and she was in regular contact with the NCUACS in the decade following Sir Harold's death.

'Dr Jeffreys joined the staff of the Meteorological Office in the later years of the war on my recommendation in order that he might help in dealing with certain difficult questions in gunnery which came to us from the Services and which involved the solution of difficult mathematical problems. He was retained after the armistice in virtue of his capacity for dealing with the application of mathematics to problems of the atmosphere'.

Jeffreys went to the Meteorological Office in 1917 and returned to Cambridge in 1922 as College lecturer in mathematics.

| G.41-G.54 | Fisher, R.A. | 1922-1987 |
| | <p>With the exception of a 1926 postcard from Fisher, an exchange of correspondence between G.N. Wilkinson, Department of Genetics, University of Adelaide and Jeffreys, 1979 (G.41) and an exchange with J.H. Bennett of the same Department 1986, almost all the papers presented here are photocopies.</p> <p>Wilkinson was working on Fisher's scientific correspondence with the view to its publication. That particular project was abandoned and Bennett, with the help of Wilkinson and David Finney, was preparing material for a projected volume: 'Statistical Inference and Analysis: Selected Correspondence of R.A. Fisher'.</p> | |
| G.41 | 1926-1979 | |
| | <p>Letter from G.N. Wilkinson, 11 October 1979, states that he is sending under a separate cover 'photostats of the whole Jeffreys correspondence file in the Fisher archives here' [i.e. University of Adelaide].</p> <p>See G.42-G.47.</p> | |
