MEDICAL RESEARCH COUNCIL (MRC)

1946-82

The material covers Mitchell's service from 1946 on MRC committees and panels established after the war to advise on radiation hazards and the medical applications of radiation. Mitchell sat on most of these bodies; the best documented here being the Committee on the Medical and Biological Applications of Nuclear Physics and the Committee on Protection against Ionising Radiations. On behalf of the MRC Mitchell attended a number of the Tripartite Conferences (Britain, the USA and Canada) held between 1948-53 to formulate programmes of study and lay down standards for permissible doses of radiation and assisted Danish investigations into thorotrast, a solution of thorium dioxide which had been widely used in Denmark for radiological investigations and which had been identified as a possible cause of illness in a number of patients. In 1959, however, with research and administrative responsibilities in Cambridge placing greater demands on his time, Mitchell reduced his by then extensive MRC commitments (see F.175).

Tripartite Conferences

1948-54, 1979

Post-war co-operation between Britain, Canada and the USA on the uses of nuclear energy included a series of tripartite meetings, among them the Tripartite Conferences on Permissible Doses, which met between 1948-53 to formulate programmes of study and lay down basic standards for tolerance doses of radiation. **Advisory Panel on the Allocation of Radioactive Isotopes
for Clinical Research**

1946-57, 1976-79

The Panel was formed in 1948, partly in response to US restrictions on the supply of radioactive isotopes, to organise the 'efficient distribution and assay of radioactive and stable isotopes required as tracer elements for purposes of research and of radioactive isotopes for therapeutic purposes'. It replaced the Trace Elements Subcommittee of which Mitchell was also a member (see F.317-F.319).

In 1976 the Department of Health and Social Security took over responsibility for the allocation of isotopes and formed the Isotope Advisory Panel on which Mitchell served for two years. In 1979 the Panel was disbanded and replaced by the Statutory Radiopharmaceutical Advisory Committee.

Subcommittee on Internal Radiations

Mitchell was chairman of this subcommittee during the 1950s. The work of the full subcommittee is poorly documented, however, and the bulk of the material presented here concerns Mitchell's work on the thorotrast problem in Denmark.

F.322-F.361 Thorotrast

F.362-F.372 General

- F.322-F.361 Thorotrast

Thorotrast, a colloidal solution of thorium dioxide, had been widely used in Denmark for radiological investigations. In 1949, however, it was suggested that thorotrast was the cause of several cases of obscure illnesses in patients through the accumulation of thorium in the body. The Danish investigators at the laboratory of the Finsen Institute requested MRC assistance. Mitchell first visited the Institute in July 1951. He made a number of subsequent visits to Denmark to investigate the thorotrast problem further.

The material chiefly consists of correspondence and papers relating to these visits for the MRC but it also includes a little later material documenting Mitchell's continued interest in the problem.

Further work on thorotrast was undertaken for the World Health Organisation from 1977 (see F.449-F.463).
